Support introduction

This document describes a set of long running presets designed to support the Spooky2 *Morgellons and Lyme v3.0* protocol. The existing *Morgellons and Lyme v3.0* protocol requires the user to run a number of presets for Spooky Remote over the course of the protocol. These presets described in this document are long running presets, for running on either 1 generator or 2 generators, that contain the entire Remote part of protocol, minus your biofeedback scan results. While these remote presets don't contain your biofeedback results, you will still have your biofeedback programs edited into the existing Contact or Plasma *Morgellons and Lyme v3.0* presets. Also, since these support presets only require one or two generators to run the remote presets, you are free to dedicate a generator to running your biofeedback programs on Spooky Remote.

Each one of these presets are utilizing each Spooky generator as if it were 2 generators, sending different frequencies to Out 1 and Out 2. When you run the Plus 2 version of the presets, your 2 generators are acting as 4 generators. Likewise, running the Plus versions on a single generator is like running presets on two generators.

These presets run the *Morgellons and Lyme v3.0* presets R05 through R78 preset on one of the outputs of the generators, while

running the ALL Maintenance and RX Healing presets on another. The Plus 2 versions use 1 output to run All Maintenance and RX Healing, and 3 outputs to run presets R05 through R78. The Plus versions use 1 output to run ALL Maintenance and RX Healing, and 1 output to run presets R05 through R78.

Each of the presets R05 through R78 run for 24 hours. The ALL Maintenance runs for 16 out of each 24 hours, and the remaining 8 hours out of 24 hours contain one of the following: RX Healing A, B, C, and RX Herxheimer. This means each of the RX preset runs an 8 hour period out of every 4 days.

Because both outputs are being sent independent frequencies you must either use the Spooky Boost BN port with your remote, or place a separate remote on Out 1 and Out 2.

Plasma Plus

The support preset for Plasma Plus runs on a single generator with Spooky Remote. The Spooky Boost is required because this preset is sending independent frequencies to Out1 and Out2. The following is a schedule for running this protocol and the preset necessary for your generator.

Day	Generator 1
1-148	Plasma Plus Support Gen1 (R) - BY

The Plasma presets, found in *\Morgellons & Lyme\Morgellons and Lyme v3.0\Plasma*, ought to be run in the following order on each day of the protocol.
